

FFG

Large capacity manure forks with easily removable grapples. Available in 6, 7 and 8 foot widths.

Although two manure forks can look the same from a distance it's not until you get up close to our fork that you get an appreciation of how seriously we take our craftsmanship. The frame of the fork as well as the grapple are built to handle years of constant abuse.

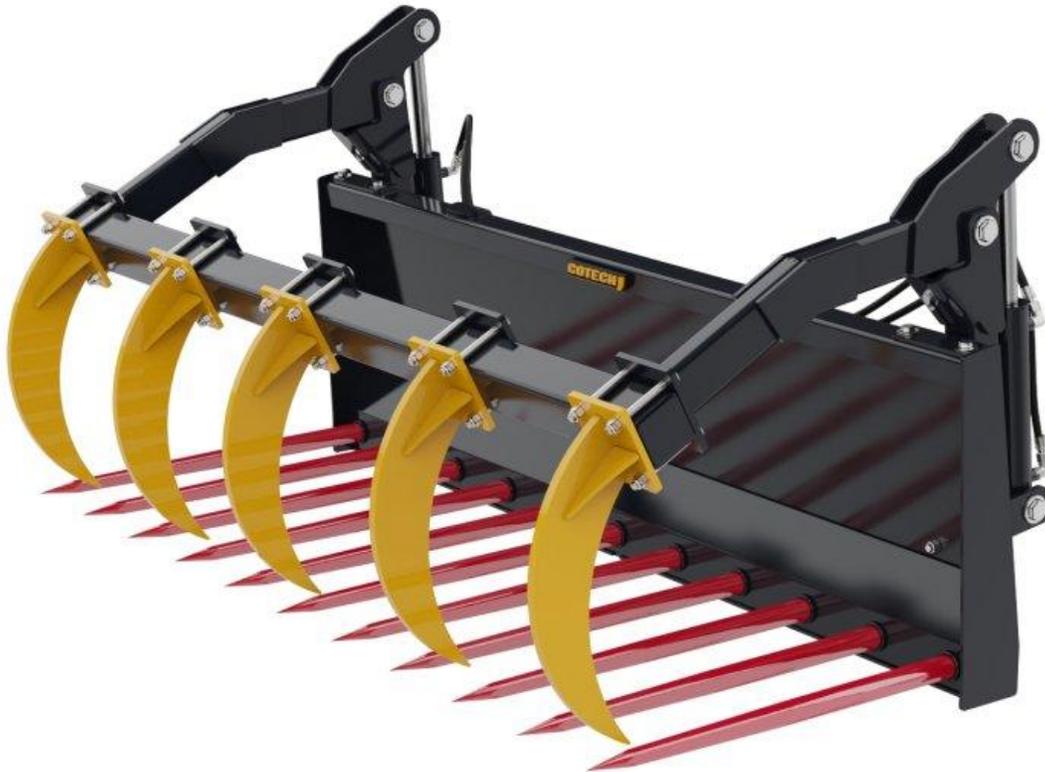

Although intended for manure many of our customers have used this unit for clearing brush or light debris.

The grapple uses $\frac{3}{4}$ "-thick steel teeth with adjustable spacing. Additional teeth are available for order.

The complete grapple can be easily unbolted and removed when not in use.

Caution: For certain Skid Steer type equipment, it is possible that our 6' model interferes with the cylinders. Please, verify the compatibility with our service department.
