

Cotech Skid Steer Pallet Forks

The main advantage of these forks is that the mounting brackets are an integral part of the structure. This makes it much easier for the operator to see the tip of the forks. This feature improves the safety and precision of operations. Thanks to its narrow and more compact design, which brings the forks closer to the lifting point, it allows for the use of the loader's maximum lifting capacity. The notches facilitate the adjustment of the width between the forks. The safety hoops are welded directly onto the frame.

Model	FPS48-40-48	FPS48-55-48
Frame Width	45"	45"
Frame Height	32"	32"
Fork Length	48"	48"
Weight (With Tines)	500 lbs.	528 lbs.
Capacity (With Tines)	4,000 lbs.	5,500 lbs.
