

INTRODUCING THE

POWER BREAKER

SERIES

This is Premier quality, engineered to perform and built to last.

Every Power Breaker is finished with a durable powder coat and high-quality decals for long-term appearance and protection in tough jobsite conditions. A built-in step makes entering and exiting your machine safer and easier, while our included spring hose holder kit keeps hydraulic lines secure and out of the way.

Each breaker comes standard with both amoil point and a chisel point, and the tooling swaps quickly so you can adapt to different applications without slowing down.

Mounting Flexibility That Makes Sense

The Power Breaker Series uses the same two-pin mounting pattern as our current driver lineup. That means you can unpin a skid steer mount and re-pin an excavator mount to the very same breaker.

In practical terms, you can run the breaker on the machine you want, when you want, without needing multiple dedicated units.

Available mount options include:

Skid Steer, Mini Skid Steer, Compact Track Loader, Mini Excavator, Full Size Excavator, and Backhoe
